

SpotOn Mobile Android Application User Manual

1. Home Page

Once the app is launched, the home page will show an overview of what a user can do with the app. They can select two things: they can proceed and go to classification, or they can go and check the informative 'skin diseases' section.

2. Classification

In classification, users can take a skin image directly from their camera or they can fetch if there's already an available image from their gallery. A permission will be asked, if they denied the app won't push through. The app will need permission to get a photo from the user's phone.

3. Preparation

The app will then analyze and predict the given image by the user if and only if the user clicked the predict button. It will be analyzed the Machine Learning model implemented in the app.

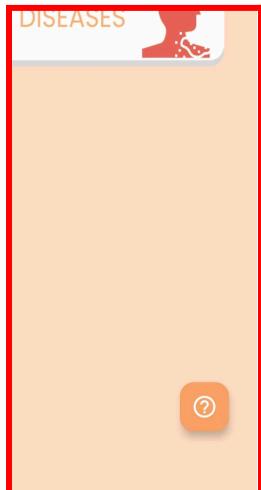

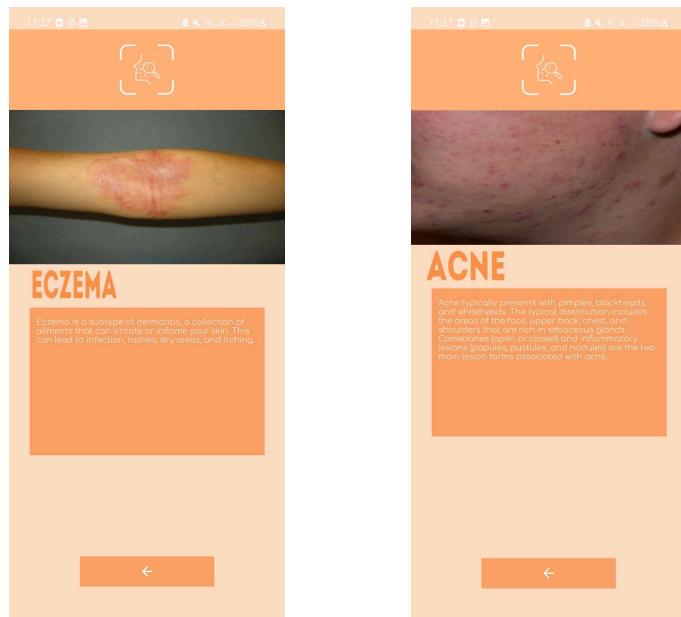

4. Result

Once complete, the app will display the results on your screen. Either acne or eczema.

5. Information section

Once finished, the user can directly view/go to click skin diseases after prediction (they can also directly go to this section at the home page). This will show the healthcare information about the two skin diseases and eczema.

6. App's user manual

At the home page, the user can also click the little question mark button. They will be redirected to the manual of the app. The image below will be shown.
